

Stats with geoms

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2

Rick Scavetta

Founder, Scavetta Academy

ggplot2, course 2

- Statistics
- Coordinates
- Facets
- Data Visualization Best Practices

Statistics layer

- Two categories of functions
 - Called from within a geom
 - Called independently
- `stats_`

geom_ <-> stat_

```
p <- ggplot(iris, aes(x = Sepal.Width))  
p + geom_histogram()
```

geom_ <-> stat_

```
p <- ggplot(iris, aes(x = Sepal.Width))  
p + geom_histogram()  
p + geom_bar()
```

geom_ <-> stat_

```
p <- ggplot(mtcars, aes(x = factor(cyl), fill = factor(am)))  
p + geom_bar()  
p + stat_count()
```

The geom_/stat_ connection

stat_	geom_
stat_bin()	geom_histogram() , geom_freqpoly()
stat_count()	geom_bar()

stat_smooth()

```
ggplot(iris, aes(x = Sepal.Length,  
                 y = Sepal.Width,  
                 color = Species)) +  
  
  geom_point() +  
  geom_smooth()
```

```
geom_smooth() using method = 'loess' and  
formula 'y ~ x'
```

stat_smooth(se = FALSE)

```
ggplot(iris, aes(x = Sepal.Length,  
                 y = Sepal.Width,  
                 color = Species)) +  
  
  geom_point() +  
  geom_smooth(se = FALSE)
```

```
geom_smooth() using method = 'loess' and  
formula 'y ~ x'
```

geom_smooth(span = 0.4)

```
ggplot(iris, aes(x = Sepal.Length,  
                 y = Sepal.Width,  
                 color = Species)) +  
  geom_point() +  
  geom_smooth(se = FALSE, span = 0.4)
```

```
geom_smooth() using method = 'loess' and  
formula 'y ~ x'
```

geom_smooth(method = "lm")

```
ggplot(iris, aes(x = Sepal.Length,  
                 y = Sepal.Width,  
                 color = Species)) +  
  geom_point() +  
  geom_smooth(method = "lm", se = FALSE)
```

geom_smooth(fullrange = TRUE)

```
ggplot(iris, aes(x = Sepal.Length,  
                 y = Sepal.Width,  
                 color = Species)) +  
  geom_point() +  
  geom_smooth(method = "lm",  
             fullrange = TRUE)
```

The geom_/stat_ connection

stat_	geom_
stat_bin()	geom_histogram() , geom_freqpoly()
stat_count()	geom_bar()
stat_smooth()	geom_smooth()

Other stat_ functions

stat_	geom_
<code>stat_boxplot()</code>	<code>geom_boxplot()</code>

Other stat_ functions

stat_	geom_
<code>stat_boxplot()</code>	<code>geom_boxplot()</code>
<code>stat_bindot()</code>	<code>geom_dotplot()</code>
<code>stat_bin2d()</code>	<code>geom_bin2d()</code>
<code>stat_binhex()</code>	<code>geom_hex()</code>

Other stat_ functions

stat_	geom_
stat_boxplot()	geom_boxplot()
stat_bindot()	geom_dotplot()
stat_bin2d()	geom_bin2d()
stat_binhex()	geom_hex()
stat_contour()	geom_contour()
stat_quantile()	geom_quantile()
stat_sum()	geom_count()

Let's practice!

INTERMEDIATE DATA VISUALIZATION WITH GGPIOT2

Stats: sum and quantile

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2

Rick Scavetta

Founder, Scavetta Academy

Recall from course 1

	Cause of Over-plotting	Solutions
1.	Large datasets	Alpha-blending, hollow circles, point size
2.	Aligned values on a single axis	As above, plus change position
3.	Low-precision data	Position: jitter
4.	Integer data	Position: jitter

Plot counts to overcome over-plotting

	Cause of Over-plotting	Solutions	Here...
1.	Large datasets	Alpha-blending, hollow circles, point size	
2.	Aligned values on a single axis	As above, plus change position	
3.	Low-precision data	Position: jitter	<code>geom_count()</code>
4.	Integer data	Position: jitter	<code>geom_count()</code>

Low precision (& integer) data

```
p <- ggplot(iris, aes(Sepal.Length,  
                      Sepal.Width))
```

```
p + geom_point()
```

Jittering may give a wrong impressions

```
p + geom_jitter(alpha = 0.5,  
                width = 0.1,  
                height = 0.1)
```

geom_count()

```
p +  
  geom_count()
```

The geom/stat connection

geom_	stat_
<code>geom_count()</code>	<code>stat_sum()</code>

stat_sum()

```
p +  
  stat_sum()
```

Over-plotting can still be a problem!

```
ggplot(iris, aes(Sepal.Length,  
                Sepal.Width,  
                color = Species)) +  
  geom_count(alpha = 0.4)
```

geom_quantile()

```
ggplot(iris, aes(Sepal.Length,  
                 Sepal.Width,  
                 color = Species)) +  
  geom_count(alpha = 0.4)
```

Dealing with heteroscedasticity

```
library(AER)
data(Journals)

p <- ggplot(Journals,
            aes(log(price/citations),
                log(subs)))) +
  geom_point(alpha = 0.5) +
  labs(...)
```

p

Using geom_quantiles

```
p +  
  geom_quantile(quantiles =  
    c(0.05, 0.50, 0.95))
```

The geom/stat connection

geom_	stat_
<code>geom_count()</code>	<code>stat_sum()</code>
<code>geom_quantile()</code>	<code>stat_quantile()</code>

Ready for exercises!

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2

Stats outside geoms

INTERMEDIATE DATA VISUALIZATION WITH GGPLOT2

Rick Scavetta

Founder, Scavetta Academy

Basic plot

```
ggplot(iris, aes(x = Species,  
                 y = Sepal.Length)) +  
  geom_jitter(width = 0.2)
```

Calculating statistics

```
set.seed(123)  
xx <- rnorm(100)  
mean(xx)
```

```
[1] 0.09040591
```

```
mean(xx) + (sd(xx) * c(-1, 1))
```

```
[1] -0.822410  1.003222
```

Calculating statistics

```
set.seed(123)
xx <- rnorm(100)

# Hmisc
library(Hmisc)
smean.sdl(xx, mult = 1)
```

	Mean	Lower	Upper
	0.09040591	-0.82240997	1.00322179

```
# ggplot2
mean_sdl(xx, mult = 1)
```

	y	ymin	ymax
1	0.09040591	-0.82241	1.003222

stat_summary()

```
ggplot(iris, aes(x = Species,  
                 y = Sepal.Length)) +  
  stat_summary(fun.data = mean_sdl,  
              fun.args = list(mult = 1))
```

- Uses `geom_pointrange()` by default

stat_summary()

```
ggplot(iris, aes(x = Species,  
                 y = Sepal.Length)) +  
  stat_summary(fun.y = mean,  
              geom = "point") +  
  stat_summary(fun.data = mean_sdl,  
              fun.args = list(mult = 1),  
              geom = "errorbar",  
              width = 0.1)
```

Not recommended!

95% confidence interval

```
ERR <- qt(0.975, length(xx) - 1) * (sd(xx) / sqrt(length(xx)))  
mean(xx)
```

```
0.09040591
```

```
mean(xx) + (ERR * c(-1, 1)) # 95% CI
```

```
-0.09071657  0.27152838
```

```
mean_cl_normal(xx)
```

	y	ymin	ymax
	0.09040591	-0.09071657	0.2715284

Other stat_ functions

stat_	Description
<code>stat_summary()</code>	summarize y values at distinct x values.
<code>stat_function()</code>	compute y values from a function of x values.
<code>stat_qq()</code>	perform calculations for a quantile-quantile plot.

MASS::mammals

Normal distribution

```
mam.new <- data.frame(body = log10(mammals$body))

ggplot(mam.new, aes(x = body)) +
  geom_histogram(aes( y = ..density..)) +
  geom_rug() +
  stat_function(fun = dnorm, color = "red",
               args = list(mean = mean(mam.new$body),
                             sd = sd(mam.new$body)))
```

QQ plot

```
ggplot(mam.new, aes(sample = body)) +  
  stat_qq() +  
  geom_qq_line(col = "red")
```

Your turn!
